General

In designing the Line Power High Voltage Neutral Grounding Resistor we went beyond "Industrial Duty", even beyond what has been thought of for years as "Mining Duty".

The resistor design meets or exceeds IEEE Standard 32-1978 and is based on our years of experience in the mining industry. Resistor components are routinely subjected to conditions that exceed their design

rating and the resistor design is rated for continuous duty. The Line Power High Voltage Neutral Grounding Resistor assembly uses edge wound stainless steel resistor elements with 100% stainless steel terminals and interconnections, porcelain insulators, galvanized steel frame and high strength/high dielectric station type main frame insulators to assure a rugged design for outdoor use.
